

- Biotechnology in our life -

SCHÜLERBERICHTE PROJEKTTREFFEN 2015/2016

des von der Europäischen Union unterstützten internationalen Projektes

Zweites Projekttreffen: 12. – 17. März 2016
Verona
Italien

Report from Silvia, Lucia, Matteo and Riccard, Liceo Scientifico Statale Galilei Galileo di Verona, Verona, Italy

In March, Liceo Galilei hosted students of the Erasmus plus project for the second meeting. It was the first time of such a project for us and we were very excited about it. We were really happy to host the friends we made two months earlier in Bielefeld here in our city and to have the possibility to continue this project together.

Organizing it was quite difficult but fulfilling too: we are happy to have been able to find nice activities and places and to have seen their interest in most of them.

This meeting was not just an opportunity to study biotechnology but also to get in contact with people from different cultures and sharing abilities and know-hows.

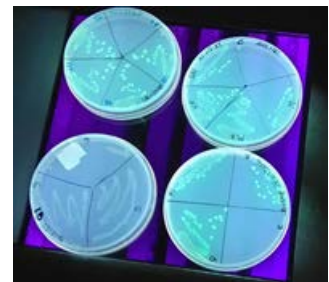

Indeed, besides listening to interesting lectures we also had fun and worked together as a team.

We were lucky to explore this branch of science because this is also a field we can choose in our future and it was particularly educational also thanks to the practical experiences.

The first activity we did was a sensory wine laboratory where we smelled different flavored glasses and had to recognize the right perfume; then we had a Bioinformatics laboratory about sensors of taste and proteins.

The experience we enjoyed the most was the laboratory about bacterial recombination at Trento's University, where we implanted a special gene in a culture of bacteria in order to give them fluorescence.

Erasmus meant also sightseeing, crossing Valpolicella valley, coasting Garda's lake, going to the Filarmonico theatre and having fun all together.

We are really glad to have taken part in this project and we would like to thank all the organizers and all the other guys who, like us, were part of this great adventure!
